

Wolbachia in Arthropods Lab

GET RID OF THE RED BEFORE YOU SUBMIT THIS- ONLY WANT TO SEE YOUR WORK, NOT MY INSTRUCTIONS

Question: Does the fly and praying mantis we have collected have wolbachia?

Claim: I do not know if any have wolbachia.

Evidence:

Reasoning: I do not know if any have wolbachia because our lines on our gel is smudged.

Answer the following for your ARTHROPOD gel.

1. Any contamination? No
2. What was the purpose of the DNA + control? The purpose of the DNA control is to see if the lab went correctly.
3. What was the purpose of the arthropod + control? The purpose of the arthropod + control is to make sure the PCR can detect arthropod DNA.
4. What was the purpose of the arthropod - control? The purpose of the - control is to make sure there is no contamination

5. Did the controls work as expected? Yes they did
 - a. If they did not, which ones did not and what do you think happened?
6. Based on the results, which of YOUR groups samples were confidently identified as arthropods? Yes we can confidently say that they worked.
7. Explain what may have happened if you did not get confident results. I think maybe we could have used too much DNA.

Answer the following for your *Wolbachia* gel.

8. Any contamination? No
9. What was the purpose of the DNA + control? To make sure the PCR worked correctly
10. What was the purpose of the arthropod + control? To make sure the pcr can detect arthropod DNA
11. What was the purpose of the arthropod - control? To check for contamination.
12. Did the controls work as expected? No.
 - a. If they did not, which ones did not and what do you think happened? None of our lines worked. I think that we used too much DNA.
13. Based on the results, which of YOUR groups samples were confidently identified as arthropods? Both were identified as arthropods.
14. Explain what may have happened if you did not get confident results. We either used too much DNA or our DNA was degraded.
